

# Tehama Bluetooth Programmer

Tehama’s Bluetooth Display Programmer gives field technicians the ability to program a Display MDT from Tehama Connect Mobile App (Android and iOS), avoiding the need to lug around a laptop. The Programmer runs on two AA batteries and is easy to use. Simply power on the Bluetooth Programmer, pair it to your smart phone from within the App, then plug the cable into the Display MDT.

Once connected you will be able to change the following parameters on a Display MDT:

- Initial Meter Read (IMR)
- Units of Measure
- Meter Type (Hot/Cold/Blank)
- Count Factor

You are still welcome to use the USB cable with the CIT as before, but this is an excellent device for those situations where your work space is limited or the laptop is too bulky.

Currently the Mobile App supports the Display MDT updating. In future App updates this Programmer will support updating DCAP parameters (IP address, Password update, WiFi parameters). Other features will be added as new products are released.

## Models

Tehama Bluetooth Programmer	TW-A30	Two AA Alkaline batteries (included)
